

MAGE SAFETEC PRO – The new mounting system

In recent years, MAGE SOLAR and its partners have installed thousands of solar energy systems for satisfied customers in Germany, Europe and the USA. Our MAGE SAFETEC installation system has proven to be an economic and efficient solution for installing photovoltaic systems on many different types of roofs and facades.

This system was the basis for the development of MAGE SAFETEC PRO. An installation system that allows for even more flexible planning and even easier installation, as it has been consequently reduced to only the necessary individual components. Pre-assembled components for all connection elements increase the convenience of the installation process and effectively save time. Moreover, storage has been simplified and clarity at the installation site has been increased.

Flexible Planning

- › Ideal for use on sloping roofs
- › Various connection options can be constructed
- › Region-specific special features can be realized

Easy Installation

- › Height is infinitely variable on the roof hook
- › Easy construction thanks to pre-assembled groups of components
- › Greater clarity at the installation site

Maximum Yield

- › Fewer components means easier storage
- › Pre-assembled groups of components save on construction time
- › All system components are subject to the highest standards of quality control

Long Lifetime

- › The production procedures are safeguarded by certification
- › All constructions are carried out in line with Eurocode standards
- › The high quality is underscored with a 10-year* product guarantee
- › All fixing materials used comply with the technical building regulations or have been awarded general technical approval from the German Institute for Civil Engineering (DIBt)

* according to our warranty conditions valid at the time of purchase, available from your MAGE SOLAR qualified partner or from MAGE SOLAR GmbH.
